

## Testimonial

I had the opportunity to take Dr. Suleiman's review classes before my Step 1 exam and looking back, it was one of the most rewarding academic decisions that I ever made. Before participating in Dr. Suleiman's review, I focused on independent studying because I felt that most review programs were expensive and unproductive. As I started taking Dr. Suleiman's classes and participating in his review sessions, I quickly realized that my basic sciences foundation wasn't as strong as I wanted it to be and that there was plenty of room for me to improve in order to reach my peak potential. Specifically, Dr. Suleiman uses a question-based teaching method to provide high yield material in a clear manner and a short timeframe. I didn't have to worry about buying different textbooks for each subject because Dr. Suleiman's resources for his course lectures include the most important points from Kaplan, BRS, High Yield, and Robbins Pathology, to list a few sources.

This last point is important because the number one trap that students fall into is that they feel the need to read every page of every book instead of just keeping things simple and focusing on the big picture. The result is seen when students take longer than they need to in taking their test. When you combine Dr. Suleiman's course lectures with his UWorld Qbank program, you are not only able to understand the material, but instead master it. As the course moved along, I saw my UWorld scores go up from a starting point of 60% to 90% by the time I took my exam. The program was intense and provided me with the right structure and environment to learn productively. I learned that it wasn't just important to memorize a fact, but that I also needed to understand the disease process and pathogenesis. I appreciated the fact that Dr. Suleiman was very accessible so that I could ask him questions during any part of the day and he would always be willing to stay late until I understood the concept. The Qbank sessions were constructive and critical to not only understanding the material, but also understanding how to strategically approach the test as a whole and each individual question. Consequently, my NBME practice test scores went from a starting point of 180 to 240 by the week of my exam. I am happy to say that I, along with all the students who enrolled in Dr. Suleiman's review program, not only passed Step 1, but achieved very competitive scores and have moved on to rotations at reputable programs. I hope that you are able to take advantage of the opportunity to be part of Dr. Suleiman's program so that you may also achieve your target score and move forward on your journey to becoming a doctor.
